ABOUT ME

I am an experienced Senior Android Developer since August 2013. Currently working at Scorp, where I develop live stream applications with Kotlin & MVVM architecture.

I have found a few chances to develop big scaled apps from scratch. For this reason, I have got a lot of experience about all phases of development process from beginning to end.

It is my goal to continue to learn and grow throught my career. While I have developed a level of expertise in designing software applications, testing and maintenance and application lifecycle, there is so much more I want to explore and learn.

In addition to my experience, I hold a Bachelor of Computer Engineering and have strong Java, Kotlin, Android SDK, Android Studio, RESTful APIs, and UI/UX implementation experience.
